Swift microwave consent form

The intended benefits. To use microwave therapy to heat shock the immune cells to eradicate the verruca virus (HPV) from the skin. An average of 3 treatments are required, in some stubborn cases a 4th or 5th treatment may be needed. Each treatment is 4 to 6 weeks apart.

Occasionally blistering of the skin may occur, if so contact me straight away for the blister to be drained and dressed.

Patients with a compromised immune system (i.e. MS, Lupus disease etc) will have a lower expected outcome.

By signing this document, you (the patient) agree that you have no metal (pins, wires, screws etc from surgery) in your feet/hands or a heart pacemaker fitted.

Photos will be taken for medical records to show before and after results.

To be completed by the patient.

I agree to Swift microwave therapy for verruca/wart treatment
